

1. Executive Summary

CiteBase is a next-generation document intelligence platform designed to provide accurate, cited answers from complex en

1.1 Core Objectives

The platform aims to achieve sub-500ms retrieval latency while maintaining 95%+ precision on document citations. It uses h

2. Technical Architecture

2.1 Ingestion & Chunking Pipeline

Documents are parsed into structural hierarchies respecting markdown headers and font boundaries. Breadcrumbs are attached to each chunk for context.

2.2 Hybrid Search & Reranking

Dense retrieval uses sentence-transformers/all-MiniLM-L6-v2 embeddings stored in ChromaDB. Sparse retrieval uses BM25 on the original text. Reranking is performed using a cross-encoder model.

3. Financial Overview

Enterprise tier pricing starts at /month per organization. Total annualized run rate projected for 2026 is .4M with gross margin
